Statement of Work (SOW)

Vendor Purchase Order Management System

Field	Detail
Project	PO Management (po-mgmt)
Version	1.0
Date	1 July 2026
Status	In development

1. Executive Summary

This project delivers a web-based **Vendor Purchase Order Management System** for manufacturing operations. The system centralizes master data for vendors, parts, and products (with Bills of Materials), and enables procurement teams to create, version, and export vendor purchase orders as PDFs.

The platform supports two procurement workflows:

- 1. **Manual PO creation** — select a vendor, add part lines with quantities, and generate a versioned PDF.
- 2. **BOM-driven PO generation** — define a build plan (products × build quantities), aggregate part demand across BOMs, resolve vendor assignments and pricing, and generate one PO per vendor.

diagram-1

2. Business Requirements and Needs

2.1 Business Context

Manufacturing teams currently manage product BOMs in spreadsheets and create vendor purchase orders manually. This leads to:

- **Data fragmentation** — vendor, part, and product information lives in disconnected Excel files.
- **Manual PO assembly** — procurement staff must manually calculate quantities when building multiple products.
- **No audit trail** — changes to purchase orders are not versioned or easily traceable.
- **Inconsistent part catalog** — duplicate or inconsistently named parts across product lines.

The system addresses these needs by providing a single source of truth for master data, automated demand aggregation from BOMs, vendor-scoped part pricing, and immutable versioned PO PDFs.

2.2 Business Objectives

#	Objective	Success Metric
BO-1	Centralize vendor, part, and product master data	All catalog data manageable in one application
BO-2	Reduce time to create vendor POs	PO creation in minutes vs. manual spreadsheet work
BO-3	Enable bulk PO generation from production build plans	One action produces POs grouped by vendor
BO-4	Maintain PO change history	Every material change creates a new downloadable PDF version
BO-5	Support bulk catalog onboarding	Excel BOM import creates products, parts, and BOM lines in one step

2.3 Scope

In scope

- Vendor, part, and product CRUD
- Structured part specifications by category (LED driver, PCB, fastener, etc.)
- Excel BOM import with embedded image extraction
- Manual product BOM editing
- Vendor–part assignment with per-vendor unit pricing
- Manual vendor PO creation and editing
- BOM-driven build plan PO generation with vendor resolution
- PO versioning with PDF export per version
- Dashboard with entity counts and recent PO activity

- Image storage for parts, products, and BOM line images

Phase Summary

Phase	Duration	Deliverables	Target
Phase 1: Foundation	~3 weeks	DB schema, app shell, shared UI components, data tables	19 Jul 2026
Phase 2: Master Data	~4 weeks	Vendors, parts, products, Excel import, vendor-part pricing	16 Aug 2026
Phase 3: Vendor POs	~2.5 weeks	Manual PO CRUD, versioning, PDF export	6 Sep 2026
Phase 4: BOM PO Generation	~2 weeks	Build plan UI, demand preview, multi-vendor PO creation	13 Sep 2026
Phase 5: Polish & Release	~2 weeks	Dashboard, QA, docs, production deployment	20 Sep 2026

4. Sign-off

By signing below, both parties confirm agreement to the scope, timeline, and deliverables described in this Statement of Work.
